LOW NOISE PURCHASING POLICY

Phillips Joinery Ltd is committed to managing and reducing noise exposure in the workplace. To demonstrate this we will:

- Consider at an early stage how new or replacement machinery could reduce noise levels in the workplace.
- Aim to reduce noise output by purchasing or hiring replacement machinery with a lower sound pressure level (dB) than current equipment.
- Ask suppliers about the likely noise levels under the conditions in which we will operate the machinery as well as test conditions.
- Try to purchase or hire from suppliers who can demonstrate a low noise design with noise control as a standard part of the machine, not as a costly optional extra.
- Keep a record of our decision process to help show that you have met our legal duties to reduce workplace noise.
- Ensure installation arrangements e.g. mounting and location help machinery operate as quietly as possible
- Ask suppliers anything about how the machine operates which could affect the noise it produces.
- Have a planned maintenance program to ensure the machine continues to operate properly and does not get louder over time.
